StarLine® M17

SMART MONITORING

Telematics

Telematic service provides simple and convenient settings, quick start and automatic software update

Flexibility

Convenient integration into onboard power supply: cars (+12V) or trucks (+24V). When disconnected from the onboard power supply, StarLine M17 switches automatically to its internal power supply

Hypersensitivity

GPS-GLONASS antenna provides hypersensitivity and an almost instant and precise location detection even under the most severe conditions

Check out our free monitoring website starline.online

- Free monitoring, personal account at starline.online
- Routes are stored at your personal account for more than 2 months
- In case the satellite connection is lost, the device will record the route data

Intelligence

Powerful ARM processor allows to implement elements of artificial intelligence: automatic setting of time and internet connection parameters, automatic balance control and low balance notification
